

Data Wrangling Report

Findings and visualizations

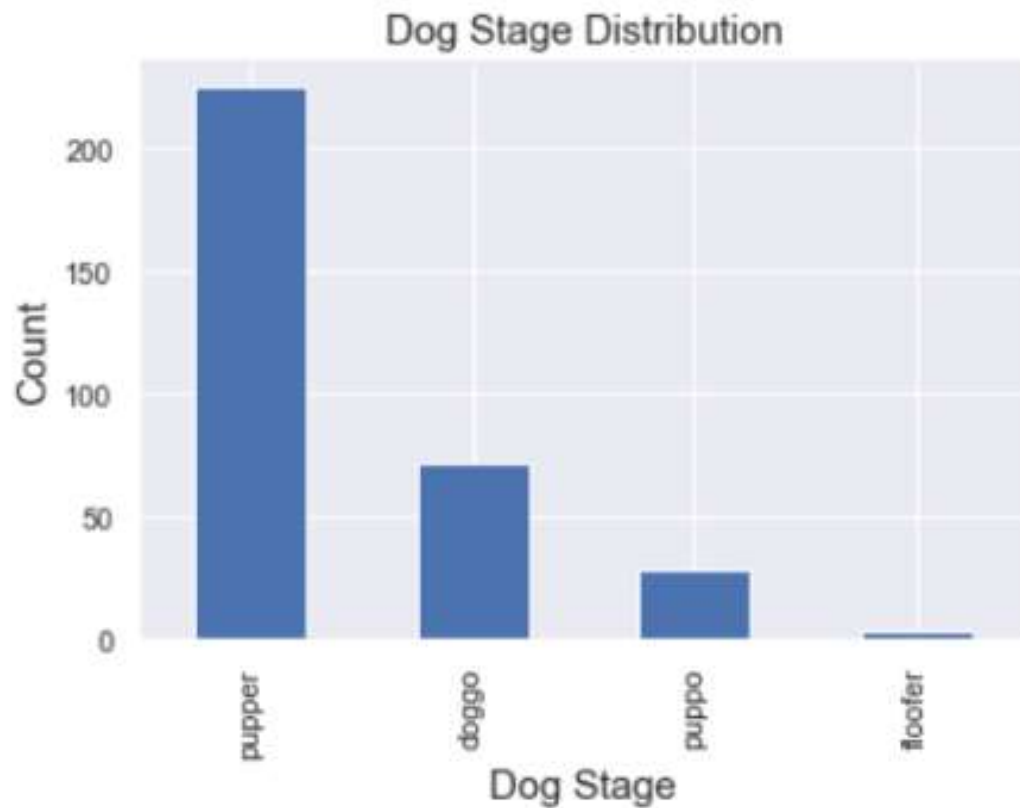

1- Distribution of Retweets and Favorites based on Ratings

people tend to put like rather than retweet, The like counts are higher than the retweet counts for each rating

The dogs with the ratings between 0.6 and 0.7 are retweeted and liked most.

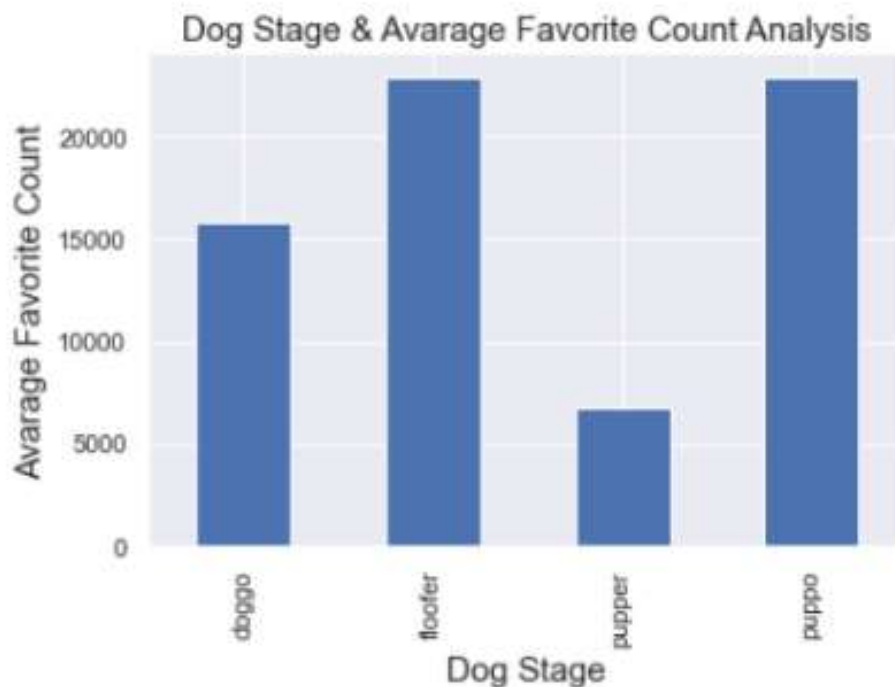

2- Dog Stage visualization

pupper have the greatest count number, after that doggo, puppoes, and lowest count is for floofer

There are 1679 dogs with unknown dog stage, which is a very high number

3- Dog Stage & Average Favorite Count Analysis

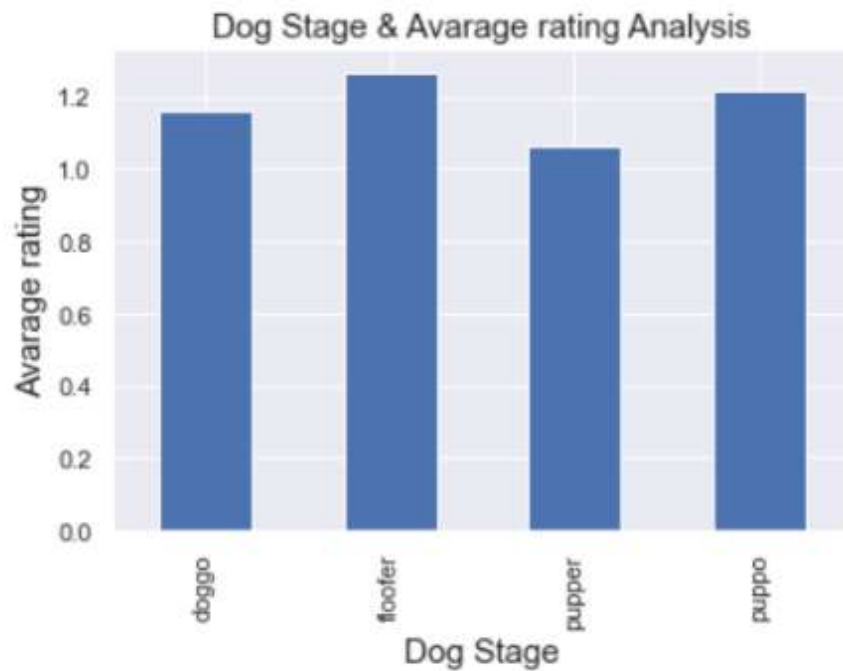

most of likes go to floofer and puppo, which they have the lowest count as we see in the previous distribution.

such a small differences b\w puppo and floofer in this distribution.

also pupper and floofer have the lowest count as we see in the previous visualization, the reason may be that they are unique and not many people have the same so they win with more likes.

pupperes have the lowest like count, also they have the biggest count number in the previous visualization

4- Dog Stage & Avarage rating Analysis

floofer and puppo also win they have the largest number of average rating, as we said, it may be the reason that it is rare

Pupper have the lowest number of average rating
